

Diffuser Tube Installation Instructions

For use with Commercial Gas Water Heaters

Follow the installation instructions in the manual supplied with the water heater in addition to these special instructions.

Depending upon the specific model, one or two Diffuser Tubes have been provided with your water heater. When using the side water connections, (front or rear locations) the Diffuser Tube(s) must be installed according to these instructions for proper operation.

1) Apply appropriate pipe thread sealant to the threads of the Diffuser Tube(s).

2) Insert plastic end of diffuser tube into the upper side water connection. If two diffuser tubes are provided, the second diffuser tube must be installed in the lower side water connection in the same manner as the first. (See Figure 1)

3) Tighten each diffuser tube until the threads are water tight and the indicator mark is located per the table below. (See Table 1 and Figure 2)

4) Maintain the indicator mark position during the installation of any additional plumbing fittings.

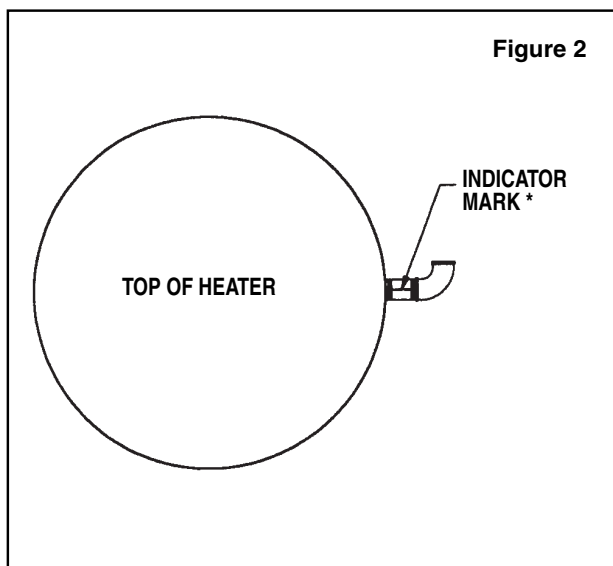

Table 1

MODEL NUMBER	OUTLET TUBE INDICATOR MARK POINTING	INLET TUBE INDICATOR MARK POINTING
G37-200 GN37-200	UP	DOWN
GN65-360	DOWN	UP
ALL OTHER MODELS	UP	UP
